FOR IMMEDIATE RELEASE:

PEREGRINE RECEIVES FAA ORGANIZATION DESIGNATION AUTHORIZATION (ODA)

Peregrine, a Denver-based aircraft certification service provider with over 14 years of Supplemental Type Certificate (STC) development experience, is pleased to announce that it has received its Organization Designation Authorization (ODA) from the Federal Aviation Administration (FAA). This will allow Peregrine to process engineering approvals on a streamlined, expedited basis.

Peregrine founder and ODA Administrator David Rankin states, “Our team has worked tirelessly to achieve this distinguished delegation, which allows for an efficient process to better serve the aerospace industry.”

After many years of demonstrating certification expertise to the industry and the FAA, Peregrine will now be classified as Organization Designation Authorization (ODA) (AIR)-834328-NM. This designation allows Peregrine to develop and approve many types of STCs for Part 23, Part 25, Part 27 and Part 29 aircraft on behalf of the FAA.

This delegation will help mitigate the effects of the FAA’s heavy workload and long lead times. Project completion dates will become more predictable while Peregrine’s customers continue to receive cost effective, high-quality certification support.

In addition to STC development for avionics upgrades, Peregrine offers Parts Manufacturing Approval (PMA) components and installation kits, plus the approval to manufacture parts to Technical Standard Order (TSO) standards. Additional services include engineering design and integration, flight testing, dealer equipment sales, rapid prototyping, 3D printing, metal fabrication, and wire harness assembly.
